

Our commitment to the continuous improvement of Hare presses since the first press was built back in 1947 has enabled us to provide our customers with the most reliable machines possible.

SERVICE

Our larger HP Models in the capacity range 10 to 80 tons, are now supplied with a high pressure filtration unit fitted in the delivery line immediately after the pump. It provides an excellent standard of filtration, is leak free and protects the whole hydraulic system from possible contamination.

*Hare Model 63HP
illustrated*

Older HP presses can be brought up to date with a conversion kit which includes new hoses, delivery pipe and manifold. It can be fitted by one of our service engineers in less than a day.

Our all inclusive price for the conversion carried out on-site is **£795.00** plus VAT.

Other improvements and upgrades available for our HP range are:-

- | | | |
|-----------------------|---|-----------------------------------------------------------|
| PLC Conversion | - | Replaces PCB based control system |
| Advantages | - | Provides high degree of reliability |
| | - | More versatile e.g. easier to link to ancillary equipment |

Erwin Sick light guard upgrade

- | | | |
|------------|---|-------------------------|
| Advantages | - | Lower maintenance costs |
|------------|---|-------------------------|
