

Our commitment to the continuous improvement of Hare presses since the first press was built back in 1947 has enabled us to provide our customers with the most reliable machines possible.

SERVICE

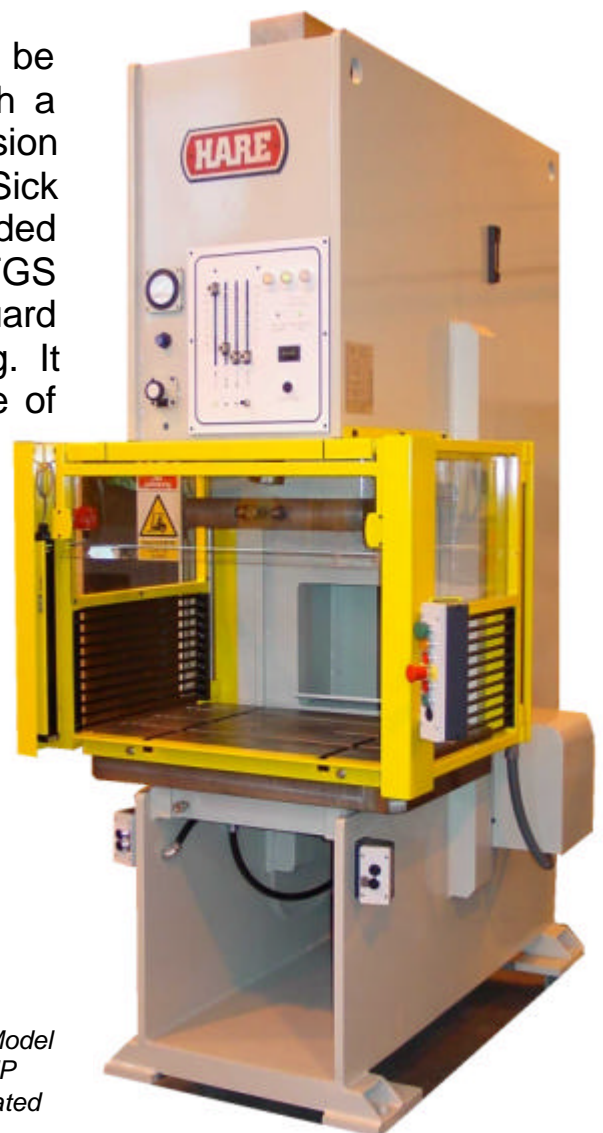

All our HP Models in the capacity range 10 to 80 tons, are now supplied with Erwin Sick FGS lightscreen guards with 14mm object detection capability and 150mm minimum separation distance. Erwin Sick is the market leader in lightscreen guarding and have been fitted to Hare presses since 1980. The FGS model is slim-line and offers great reliability with very low maintenance costs.

Older HP presses can be brought up to date with a lightscreen conversion replacing the original Sick LVS or LVU unit. Included are the new FGS lightscreen units guard doors fitting and wiring. It can be installed by one of our service engineers in less than a day.

Our all inclusive price for the conversion carried out on-site is £2,450 plus VAT.

Other improvements and upgrades available for our HP range are:-

- | | | |
|--|---|---|
| PLC Conversion | - | Replaces PCB based control system |
| Advantages | - | Provides high degree of reliability |
