

# The Hub of it:

'Every automotive manufacture who prefers wheel studs to bolts can benefit from Hare's tried and tested stud-to-hub assembly technique'.

## Design:

Bringing together **Intec** advanced tooling and Hare press technology, any number of studs can be accommodated. Each stud is guaranteed to be pressed fully home by virtue of the unique hydraulic compensation system incorporated into the top tool.

## 100% in process inspection:

Each stud assembly load is monitored and recorded on a **Decade** 260 series load monitor, ensuring only perfect assemblies can continue along the manufacturing process.

## Turnkey Solutions:

Hare Tooling is the dedicated tooling division of P.J.Hare Ltd. It provides complete assembly solutions utilising standard machines from the Hare range of presses from 1.5 to 80 tons.
